Variety sheet

Lea

A very early firm variety with deep yellow flesh, excellent taste and an attractive appearance. Robust: resistant to viruses, late blight, common scab and internal defects.

Cooking type	Maturity	Use	Tubers	Skin and flesh	Storability
A	Very early	Early table use, pre-packing	Attractive, oval	Yellow / deep yellow	Long-term
Firm, salad					

Tubers and quality

Tuber shape	Oval
Number of tubers	Medium
Eye depth	Very shallow
Skin	Yellow, smooth
Flesh	Deep yellow
Yield	Medium
Starch content	Medium
After-cooking darkening	Very low
Dormancy	Long
Flower colour	White

Resistance

Late blight, foliage	High
Late blight, tubers	High
Common scab	Very high
Silver scurf	High
Virus Y (PVY)	Medium to high
Tuber necrosis (Yntn)	Very high
Potato cyst nematode Ro1	Resistant

Why Lea

- Excellent taste
- Deep yellow flesh and attractive look
- Robust, broad resistance
- Suitable for organic and premium pre-packing

In the field

Early development	Fast
Black scurf (resistance)	High
Blackleg (resistance)	High
Secondary growth (resistance)	High
Mechanical damage (resistance)	Very high
Internal bruising (resistance)	Very high

Data are based on the breeder's information and our own experience. They are indicative; results always depend on soil, weather and crop management.

Cultivation

From planting to storage

1 Seed preparation and planting

- Plant into warm soil, ideally at least 8 °C.
- Thanks to long dormancy, warm the seed before planting so the eyes sprout.

2 During the growing season

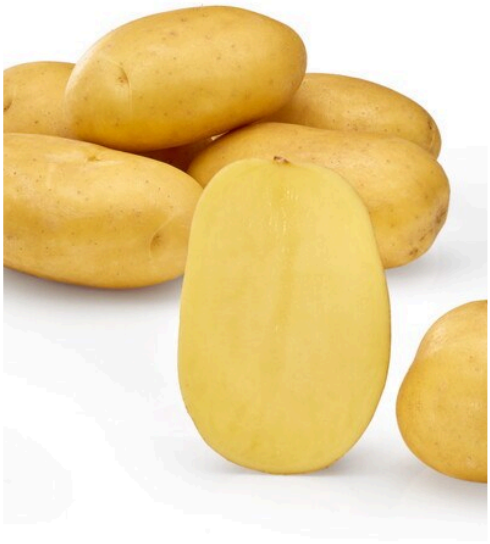

- Keep regular protection against late blight.

3 Haulm killing and harvest

- Harvest once the skin has set, and gently to avoid bruising.

4 Storage

- After harvest let the tubers dry and wounds heal.
- Store in the dark, cool and dry.
